Summer season invites a variety of pests into your home and office. Here are some tips to prevent infestation of common summer pests.

### COCKROACH

- Store dry foods in tightly sealed containers or in sealed plastic bags.
- Clean up food debris from food preparation areas, under sinks and appliances.
- Clear out garbage on a daily basis and keep all waste materials in covered bins.
- Remove old stack of newspapers and magazines, unused cardboard boxes and all other forms of clutter.
- Seal areas such as gaps around door, pipes and cracks to reduce cockroaches hiding place and access to your property.

### MOSQUITO

- Ensure drains are kept clear and running.
- Remove unnecessary vegetation around your premise.
- Do not leave standing water.
- Fit mosquito screen to windows.
- After dark, keep windows and doors closed or block out the light with curtains.

### FLY

- Fit flyscreen to windows, especially around kitchen and waste areas.
- Ensure all waste containers have tightly sealed lids.
- Clear food debris and liquid spillages from food consumption and preparation areas, under the kitchen benches and appliances.
- Do not leave standing water.
- Ensure drains are kept clean and free of debris to reduce fly breeding sites.

### RATS

- Keep food materials in metal or glass containers with tight-fitting lids.
- Tidy inside the house and around the garden — less clutter means fewer places to hide.
- Place outdoor rubbish bags in metal bins with securely fitted lids to stop them feeding on contents.
- Clean up pet food and bird seed debris and store pet food in robust containers with fitted lids, preferably above ground level.
- Keep gardens free of debris. If you have compost heap don't include organic food waste as this will attract rats.
